

Product Specification Sheet

Model: MS3765

MS3700

Slim Plug-In Arithmetic Operation Unit with Isolated Single/Dual Output

DESCRIPTION

The MS3765 is a slim, plug-in arithmetic operation unit that receives two DC current or voltage signals and outputs a signal proportional to the result (sum, difference, product, or quotient) of an arithmetic operation (addition, subtraction, multiplication, or division). The unit provides isolated single or dual output.

ORDERING CODE

MS3765 - □ - □ □ □ □			
Model ————			
Power Supply ———			
A : 100 to 240V AC (50 to 60)Hz)		
D : 24V DC	P : 100 to 240V DC		
Input 1			
A : 4 to 20mA DC	3: 0 to 1V DC		
B : 2 to 10mA DC	4: 0 to 10V DC		
C : 1 to 5mA DC	5: 0 to 5V DC		
D : 0 to 20mA DC	6: 1 to 5V DC		
	4W: +10V DC		
	5W : +5V DC		
	0 : Other DC voltage signal		
*1: Shunt resistor 50Ω			
Input 2			
The codes are the sam	ne as for Input 1.		
Output 1			
A : 4 to 20mA DC	1: 0 to 10mV DC		
	2: 0 to 100mV DC		
Z : Other DC current signal			
_ culor 2 c carrent digital	4: 0 to 10V DC		
	5: 0 to 5V DC		

Output 2

No code: None

The codes are the same as for Output 1

6: 1 to 5V DC **3W**: ±1V DC **4W**: ±10V DC **5W**: ±5V DC

0: Other DC voltage signal

Note 1: When a voltage output is selected for Output 1, a current output cannot be selected for Output 2.

Note 2: When the code A (4 to 20mA) is selected for both of the two outputs, the output load will be 550Ω maximum for Output 1 and d 350Ω maximum for Output 2.

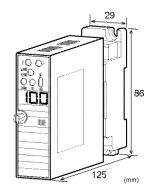

Options

No code: None

/L: Dual current output with high output load (OUT-1: 750Ω / OUT-2: 550Ω)

/X: Others (Special order)

* For non-standard options, ask MTT for availability.

ORDERING INFORMATION

To place an order, please use the ordering code format as shown on the left.

(e.g.) MS3765-A-66A

* Default settings: Addition, K1 = 1.0, K2 = 1.0

Other Ordering Examples:

For an input code of "0": MS3765-A-0AA (Input: 0.2 to 1V) For an output code of "Z": MS3765-A-A6Z (Output: 8 to 20mA)

For specific settings (Type of arithmetic operation / Input-1 factor / Input-2 factor): MS3765-A-66A (Subtraction / K1 = 2.0 / K2 = 2.0)

Note: If you wish to include multiple options in your order, specify the option codes in series (e.g. /LX).

SETTING

EQUATION SETTING

Setting Procedure

Setting an equation requires the following steps:

- 1. Turn on the power while pressing the DOWN Switch.
- 2. The Status Indicator LED will blink alternately red and green with the Factor Indicator off. Then, release the DOWN Switch within five seconds.
- 3. Any of the numbers 1 through 4 will appear only in the middle digit of the Factor Indicator except for the following cases. In such cases, you should try again from the beginning.
 - The Status Indicator LED did not repeatedly light red and green after the power is turned on.
 - The DOWN Switch was pressed and held for more than five seconds.

4. The number (arithmetic operation code) displayed represents the currently selected equation. Use the UP or DOWN Switch to change the equation. The arithmetic operation codes and corresponding equations are as shown below.

Arithmetic Operation Code		Equation
1	Addition	$Y = (IN1 \times K1) + (IN2 \times K2)$
2	Subtraction	$Y = (IN1 \times K1) - (IN2 \times K2)$
3	Multiplication	$Y = (IN1 \times K1) \times (IN2 \times K2)$
4	Division	$Y = (IN1 \times K1) / (IN2 \times K2)$

 After selecting the arithmetic operation code, set the IN1/IN2 Selector Switch to the opposite position to where it is located so that the selected code will be saved in the unit.

Note: Failure to do this will prevent the code from being saved

Immediately after the IN1/IN2 Selector Switch is operated, the Factor Indicator will be off for approx. 0.5 second.

Turn the power off and on again, and the unit will start its operation according to the set equation.

Factory Default Setting

If not specified, the arithmetic operation will be set to the factory default, "addition".

FACTOR SETTING

Setting Procedure

When the IN1/IN2 Selector Switch is set to the IN1 position, the Factor Indicator shows the current IN1 factor. This factor value can be changed to a desired value by pressing the UP/DOWN switch.

When the IN1/IN2 Selector Switch is set to the IN2 position, the Factor Indicator shows the current IN2 factor. This factor value can be changed to a desired value by pressing the UP/DOWN switch.

The set factors will be separately saved for each equation.

Indicator

The Factor Indicator goes OFF if no switch is operated for one minute.

UP/DOWN Switch

The switch is of a push button type. Pressing and holding the switch increases the speed at which the value changes.

Factory Default Setting

If not specified, the IN1 and IN2 factors will be both set to the factory default, 1.00.

LED STATUS INDICATOR

INDICATOR PATTERNS

No.	Event	Factor Indicator (7-segment LED)	Status Indicator LED	Output	Recovery Operation
1	Power ON or switch operation	Blinks 3 times (1 s ON - 0.5 s OFF cycle), then displays an arithmetic operation code for 1 second.	Green LED turns ON for 1 second and then red LED turns ON for 0.5 second. This cycle is repeated 3 times, followed by green LED lighting for 1 second.	Normal	-
2	Normal operation	OFF	Green LED is ON.	Normal	_
3	Factor setting	Set value	Green LED is ON.	Normal	-
4	DAC error	Error code: 01	Red LED blinks at 0.25 second intervals.	Typically 0%, but may vary.	None
5	ADC compensated value error	Error code: 02	Red LED blinks at 1 second intervals.	0%	None
6	Arithmetic operation mode setting error	Error code: 04	Red LED blinks at 1 second intervals.	0%	Reconfig- uration
7	Input factor error	Error code: 08	Red LED blinks at 1 second intervals.	0%	Reconfig- uration
8	System error	Not defined.	Red LED is ON; Green LED is not defined.	Typically 0%, but may vary.	None

Notes:

No. 1: When the Factor Indicator is ON, a 3-digit number "888" with dots is displayed.

No. 4 -7: Only the last two digits are displayed in the event of an error.

No. 8: The red LED sometimes fails to light up.
