## DESCRIPTION

The MS3765 is a slim, plug-in arithmetic operation unit that receives two DC current or voltage signals and outputs a signal proportional to the result (sum, difference, product, or quotient) of an arithmetic operation (addition, subtraction, multiplication, or division). The unit provides isolated single or dual output.

## Input 2

The codes are the same as for Input 1.

## Output 1

| A: 4 to 20 mA DC | 1: 0 to 10 mV DC |
| :---: | :---: |
| D: 0 to 20 mA DC | 2: 0 to 100 mV DC |
| Z: Other DC current signals | 3: 0 to 1 V DC |
|  | 4: 0 to 10 V DC |
|  | 5: 0 to 5V DC |
|  | 6: 1 to 5V DC |
|  | 3W: $\pm 1 \mathrm{~V}$ DC |
|  | 4W: $\pm 10 \mathrm{~V}$ DC |
|  | $5 \mathrm{~W}: \pm 5 \mathrm{~V}$ DC |
|  | $\mathbf{0}$ : Other DC voltag |

## Output 2

No code: None
The codes are the same as for Output 1
Note 1: When a voltage output is selected for Output 1, a current output cannot be selected for Output 2.
Note 2: When the code A (4 to 20 mA ) is selected for both of the two outputs, the output load will be $550 \Omega$ maximum for Output 1 and d $350 \Omega$ maximum for Output 2.

## Options

No code: None
/L: Dual current output with high output load
(OUT-1: 750 / OUT-2: 550
/H: Polyurethane conformal coating
/X: Others (Special order)

* For non-standard options, ask MTT for availability.

## ORDERING INFORMATION

To place an order, please use the ordering code format as shown on the left.
(e.g.) MS3765-A-66A

* Default settings: Addition, K1 = 1.0, K2 = 1.0

Other Ordering Examples:
For an input code of " 0 ": MS3765-A-0AA (Input: 0.2 to 1 V )
For an output code of "Z": MS3765-A-A6Z (Output: 8 to 20 mA )
For specific settings (Type of arithmetic operation / Input-1 factor / Input-2 factor): MS3765-A-66A (Subtraction / K1 = $2.0 / \mathrm{K} 2=2.0$ )
Note: If you wish to include multiple options in your order, specify the option codes in series (e.g. /LX).

## SPECIFICATIONS

## OPOWER SECTION

| Power Requirements | $\begin{aligned} & 100 \text { to } 240 \mathrm{~V} \mathrm{AC}: 85 \text { to } 264 \mathrm{~V} \text { AC ( } 47 \\ & \text { to } 63 \mathrm{~Hz} \text { ) } \\ & 24 \mathrm{~V} \text { DC: } 24 \mathrm{~V} \text { DC } \pm 10 \% \\ & 100 \text { to } 240 \mathrm{~V} \text { DC: } 85 \text { to } 264 \mathrm{~V} \text { DC } \\ & \hline \end{aligned}$ |  |  |
| :---: | :---: | :---: | :---: |
| Power Sensitivity | Better than $\pm 0.1 \%$ of span for each power supply range. |  |  |
| Power Line Fuse | 160 mA fuse is installed (standard). |  |  |
| Power Consumption |  |  |  |
| Power | $100-240 \mathrm{~V} \mathrm{AC}$ | 24 V DC | 100-240V DC |
| Single Output | 6.0 VA max | 1.7 W max | 6.0W max |
| Dual Output | 6.5VA max | 2.1W max | 7.2W max |

## INPUT SECTION

Input Resistance
Voltage Input (DC)
Current Input (DC)
With or without power: $1 \mathrm{M} \Omega \mathrm{min}$.

| 4 to 20 mA (std.) | $250 \Omega$ |
| :--- | :--- |
| 2 to 10 mA | $250 \Omega$ |
| 1 to 5 mA | $100 \Omega$ |
| 0 to 20 mA | $250 \Omega$ |
| 10 to 50 mA | $10 \Omega$ |

| Allowable Input Voltage |  |
| :--- | :--- |
| Voltage Input Model | 30 V DC max., continuous (for a span |
|  | up to 10V) |
| Current Input Model | $40 \mathrm{~mA} \mathrm{DC} \mathrm{max.} ,\mathrm{continuous} \mathrm{(for} 4$ to  <br>  20 mA ) |
| Input Range | 0 to $120 \%$ |

TERMINAL ASSIGNMENTS

| (1) | P (+) |
| :---: | :---: |
| (2) | N (-) |
| $\stackrel{1}{=}$ | GND |
| (4) | + OUTPUT 1 |
| (5) | - OUTPUT 1 |
| (6) | - INPUT 2 |
| (7) | + OUTPUT 2 |
| (8) | - OUTPUT 2 |
| (9) | + INPUT 1 |
| (10) | - INPUT 1 |
| (11) | + INPUT 2 |

## FRONT VIEW

## SETTING

## EQUATION SETTING

## Setting Procedure

Setting an equation involves the following steps:

1. Turn on the power while pressing the DOWN Switch.
2. The Status Indicator LED will blink alternately red and green with the Factor Indicator off. Then, release the DOWN Switch within five seconds.
3. Any of the numbers 1 through 4 will appear only in the middle digit of the Factor Indicator except for the following cases. In such cases, you should try again from the beginning.

- The Status Indicator LED did not repeatedly light red and green after the power is turned on.
- The DOWN Switch was pressed and held for more than five seconds.

4. The number (arithmetic operation code) displayed represents the currently selected equation. Use the UP or DOWN Switch to change the equation. The arithmetic operation codes and corresponding equations are as shown below.

| Arithmetic <br> Operation <br> Code | Equation |  |
| :---: | :--- | :--- |
| 1 | Addition | $\mathrm{Y}=(\mathrm{IN} 1 \times \mathrm{K} 1)+(\mathrm{IN} 2 \times \mathrm{K} 2)$ |
| 2 | Subtraction | $\mathrm{Y}=(\mathrm{IN} 1 \times \mathrm{K} 1)-(\mathrm{IN} 2 \times \mathrm{K} 2)$ |
| 3 | Multiplication | $\mathrm{Y}=(\mathrm{IN} 1 \times \mathrm{K} 1) \times(\mathrm{IN} 2 \times \mathrm{K} 2)$ |
| 4 | Division | $\mathrm{Y}=(\mathrm{IN} 1 \times \mathrm{K} 1) /(\mathrm{IN} 2 \times \mathrm{K} 2)$ |

5. After selecting the arithmetic operation code, set the IN1/IN2 Selector Switch to the opposite position to where it is located so that the selected code will be saved in the unit.
Note: Failure to do this will prevent the code from being saved.
Immediately after the IN1/IN2 Selector Switch is operated, the Factor Indicator will be off for approx. 0.5 second.
6. Turn the power off and on again, and the unit will start its operation according to the set equation.

Factory Default Setting
Unless otherwise requested, the arithmetic operation will be set to the factory default, "addition".

## FACTOR SETTING

## Setting Procedure

When the IN1/IN2 Selector Switch is set to the IN1 position, the Factor Indicator shows the current IN1 factor. This factor value can be changed to a desired value by pressing the UP/DOWN switch.
When the IN1/IN2 Selector Switch is set to the IN2 position, the Factor Indicator shows the current IN2 factor. This factor value can be changed to a desired value by pressing the UP/DOWN switch.
The set factors will be separately saved for each equation.

## Indicator

The Factor Indicator goes OFF if no switch is operated for one minute.

## UP/DOWN Switch

The switch is of a push button type. Pressing and holding the switch changes the value faster.

## Factory Default Setting

If not specified, the IN1 and IN2 factors will be both set to the factory default, 1.00.

## LED STATUS INDICATORS

INDICATOR PATTERNS

| No. | Event | Factor Indicator <br> (7-segment LED) | Status Indicator LED | Output | Recovery <br> Operation |
| :---: | :--- | :--- | :--- | :--- | :--- |
| 1 | Power ON or switch <br> operation | Blinks 3 times (1 s ON <br> -0.5 s OFF cycle), <br> then displays an <br> arithmetic operation <br> code for 1 second. | Green LED turns ON for 1 second and <br> then red LED turns ON for 0.5 second. <br> This cycle is repeated 3 times. | Normal | - |
| 2 | Normal operation | OFF | Green LED is ON. | Normal | - |
| 3 | Factor setting | Set value | Green LED is ON. | Normal | - |
| 4 | DAC error | Error code: 01 | Red LED blinks at 0.25 second intervals. | Typically $0 \%$, <br> but may vary. | None |
| 5 | ADC compensated <br> value error | Error code: 02 | Red LED blinks at 1 second intervals. | $0 \%$ | None |
| 6 | Arithmetic operation <br> mode setting error | Error code: 04 | Red LED blinks at 1 second intervals. | $0 \%$ | Reconfig- <br> uration |
| 7 | Input factor error | Error code: 08 | Red LED blinks at 1 second intervals. | $0 \%$ | Reconfig- <br> uration |
| 8 | System error | Not defined. | Red LED is ON; Green LED is not <br> defined. | Typically $0 \%$, <br> but may vary. | None |

Notes:
No. 1: When the Factor Indicator is turned ON, a 3-digit number " 888 " with dots is displayed.
No. 4 -7: Only the last two digits are displayed in the event of an error.
No. 8: The red LED may fail to light up.
