## DESCRIPTION

The MS3909 is a chassis－mount pulse shaper（pulse isolator） that converts pulse train signals into mutually isolated dual channel pulse train signals．
$\nabla \quad$ A multi－slot chassis provides ease of maintenance and high－density mounting．
$\nabla$ Input，output 1，output 2，and power circuits are all isolated from each other．
$\nabla \quad$ Equipped with a fuse on the DC power line as standard．
