

#### DESCRIPTION

The MS3103 is a terminal block type millivolt (mV) isolator that converts mV input signals from sensors or other devices into commonly used DC signals and provides an isolated dual output.

# Output 2

# The codes are the same as for Output 1.

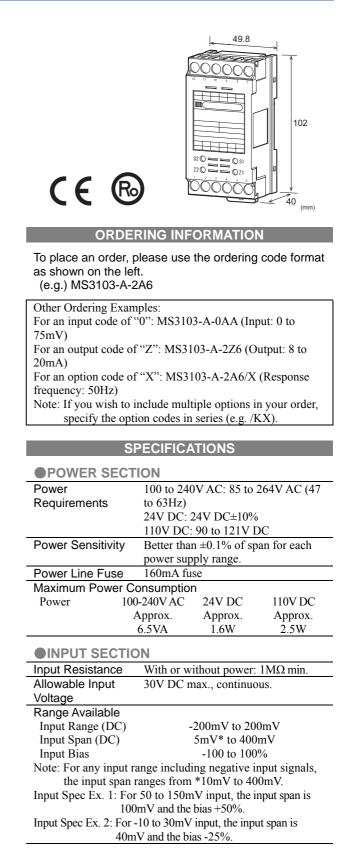

- Note 1: When a voltage output is selected for Output 1, a current output cannot be selected for Output 2.
- Note 2: When the code A (4 to 20mA) is selected for both of the two outputs, the output load will be  $550\Omega$ maximum for Output 1 and  $350\Omega$  maximum for Output 2.

## Options

# No code: None

**/K**: Fast response (0 to 90% response time: 10ms max.) **/X**: Others (Special order)
